Welcome to Bahadır KESKİN's home page.

We study on tetrapyrrole [macrocyclic compounds](#) such as [Phthalocyanines](#), porphyrines and porphyrazines, and also organometallic compounds as ferrocene derivatives. We synthesize and characterize these compounds. Beyond this, we work on physical, chemical and biological properties of these compounds like as electrochemical and spectrochemical, electrical (dielectric constants), optical (band-gap calculations), antifungal, antibacterial and antioxidant activities of these compounds with our colleagues.

#### Research Topics:

Phthalocyanine (Pc) is a beautifully symmetrical 18 p-electron aromatic macrocycle, closely related to the naturally occurring porphyrins. Like the porphyrins, the Pc macrocycle can play host to over seventy different metal ions in its central cavity. Since its discovery over seventy years ago, Pc and its derivatives have been extensively used as colorants (dyes or pigments).

A [supercapacitor](#) is an electrochemical capacitor that has an unusually high energy density when compared to common capacitors. Supercapacitor is also known as Electric Double Layer Capacitor(EDLC) or Ultra capacitor. The capacitance range is from 100 Farad to 10KFarad.

#### **Fatures:**

- I. Stores high amount of energy.
- II. High rates of charge and discharge.
- III. Have high capacitance.
- IV. Low toxicity.
- V. High cycle efficiency (95%)
- VI. Little degradation over thousands of cycles.

#### [A range of supercapacitors](#)

#### [Dye-Sensitized Solar Cell \(DSSC\):](#)

Now that we are near the end of the first decade of the 20th century, future energy demands make for sobering reading. The world currently uses about 13 terawatts (TW) of energy, and it is predicted by 2050, an additional 10 TW will be required. Not only that, the additional energy required will be have to be carbon neutral. Not only that, we are heading for peak oil. Considering all of this, what is the role of solar energy?
