Açıklama: Bu çizelge, dağılımın sağ kuyruğundaki alanı göstermektedir (yani $Z \ge 0$). Ama normal dağılım $Z = 0$ noktası etrafında bakışık (simetrik) olduğundan sol kuyruktaki alan, kendisine karşılık gelen sağ kuyruk alanıyla aynıdır. Sözgelimi $P(-1.96 \le Z \le 0) = 0.4750$. Dolayısıyla $P(-1.96 \le Z \le 1.96) = 2(0.4750) = 0.95$.
