## INTRODUCTION TO COASTAL HYDRAULICS

## HOMEWORK 1

## Question 1

The depth of water at a wave channel varies between 20 cm and 80 cm . What should be the period ranges that generate deep water, shallow water or intermediate water conditions in the channel?

## Question 2

If the wave profile is given by; $\eta=0.5 \sin (0.0866 x-0.785 t)$
a) Draw the wave profile (for $\Delta t=T / 8, x=0 \mathrm{~m}$ )
b) Calculate the water depth of the recorded wave profile and find the deep water wave length.

## Question 3

A wave with a period of $\mathrm{T}=7 \mathrm{sec}$ and a height of $\mathrm{H}=3 \mathrm{~m}$ is propagating over a water depth of $\mathrm{d}=10 \mathrm{~m}$. Determine the maximum horizontal and vertical components of particle velocity at $\mathrm{z}=-4 \mathrm{~m}$ below the surface.

## Question 4

A wave with a period of $\mathrm{T}=10 \mathrm{sec}$ and a height of $\mathrm{H}=2 \mathrm{~m}$ is propagating from deep water into shallow water.
a) At a depth of $\mathrm{d}=100 \mathrm{~m}$, determine the maximum horizontal and vertical components of particle velocity and the maximum horizontal and vertical water particle displacements for $\mathrm{z}=$ -80 m and $\mathrm{z}=-\mathrm{d}$. ( $\mathrm{u}_{\mathrm{max}}, \mathrm{w}_{\text {max }}, \mathrm{A}$ and B ).
b) At a depth of $\mathrm{d}=39 \mathrm{~m}$, determine the maximum horizontal and vertical components of particle velocity and the maximum horizontal and vertical water particle displacements for $\mathrm{z}=$ -30 m and $\mathrm{z}=-\mathrm{d}$. ( $\mathrm{u}_{\mathrm{max}}, \mathrm{w}_{\text {max }}, \mathrm{A}$ and B ).
c) At a depth of $\mathrm{d}=2.4 \mathrm{~m}$, determine the maximum horizontal and vertical components of particle velocity and the maximum horizontal and vertical water particle displacements for $\mathrm{z}=$ 0 and $\mathrm{z}=-\mathrm{d}$. ( $\mathrm{u}_{\max }, \mathrm{w}_{\text {max }}, \mathrm{A}$ and B ).

## Question 5

A wave with a period of $\mathrm{T}=8 \mathrm{sec}$ is propagating over a water depth of $\mathrm{d}=19 \mathrm{~m}$. The equation of the elliptical orbit is as follows at $\mathrm{z}=0$;
$\frac{\alpha^{2}}{7.87}+\frac{\beta^{2}}{4}=1$
a) Determine the wave profile.
b) If the movement of the water particle starts at $\mathrm{T}=0$ from the top of the orbit, find the particle velocity at $3 / 4$ of the orbital length.
